```
/note="Vector: pBluescript II SR+; Site_1: EcoRI; Site_2:
XhoI; The CDNA library was constructed from mRNA isolated
from mature flowers of field grown plants for the cultivar
Raiden. Complementary DNA was synthesized from mRNA using
a primer consisting of a poly(dT) sequence with a XhoI
restriction site. EcoRI adapters were ligated to the
blunt-ended cDNA fragments followed by XhoI digestion. The
CDNA fragments were directionally cloned into the
ECORI-XhoI restriction site of the pBluescript vector. The
ligated cDNA fragments were transformed into DH10B host
cells (GlbcoBRL). This library was constructed in the
laboratory of Dr. Randy Shoemaker."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  XhoI; Various sizes of sprouting eyes (2mm to 15mm) were taken from tubers. The tubers were incubated at 26C in the dark for 2-3 weeks prior to sprouting. The eyes were frozen in liquid nitrogen immediately upon removal from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            э;

XhoI; cDNA was prepared from polyA+ enriched RNA. The cDNA was directionally ligated into the Unizap XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-Zap phage using Ex-assist helper phage and propagated in XLOLR cells."

                                                                                                                                                                                                                                                                                                                                                                                                /note="Vector: pBlusscript SK-; Site_l: ECORI; Site_2:
XhoI; Immature pods, ranging in age from 15 to 30 days
after pollination, were collected from greenhouse-grown
plants. At harvest, seeds were removed from pods and
isolated pod walls were collected and immediately frozen
in liquid nitrogen. Pod walls were pooled for mRNA
extraction. CDNA was prepared from polyA+ enriched RNA.
The CDNA was directionally ligated into the Unizap XR
vector from Stratagene and packaged using Gigapack III
Gold packaging extracts. Plasmids containing cDNA inserts
were excised from the recombinant lambda-Zap phage using
Ex-assist helper phage and propogated in XLOLR cells."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of Trichoderma reesei Ptc2 CDNA, we encoding a protein (see AABB2980) of 438 amino acids. The CDNA was obtained from a CDNA library by hybridization with an Aspergillus nidulans ptcB fragment. PTC2 is a protein an organization with an Aspergillus nidulans ptcB fragment. PTC2 is a protein and regulates the CDNA phosphatase. It dephosphorylates TRE1 protein and regulates the unfolded protein response (UPR). The invention provides methods for increasing the secretion of a heterologous protein in a cell by continuous an elevated UPR. This can be achieved by modulating the activity of HACI (or hacA), PTC2/Bo or IRE1 in the cell. The cell from which the protein is secreted can be any cell having an UPR, of the protein of interest can be any secreted protein such as a therapeutic protein or an industrial enzyme, e.g. lipase, cellulase, endoglucanse-H, protease, carbohydratase, reductase, oxidase, isomerase, transferase, kinase, phosphatase, alpha-amylase, glucoamylase, lignocellulose hemicellulase, pectinase and ligninase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Increasing secretion of heterologous proteins e.g. lipase and cellulase in eukaryotic cells useful in industry to increase production and facilitate purification, by inducing an elevated unfolded protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      606 ctggagactctcgctgcataatgtctcgacgtggcgaggctgtaaatctctcgattgatc 665

The method involves inducing the elevated UPR by increasing the presence of proteins such as HACI, HACA, PTC2 or IRE1 in cells. The method and sequences are useful for increasing the secretion of heterologous proteins (e.g. lipase, cellulase, carbohydrase) in eukaryotic cells useful in industry to increase protein yields and to facilitate purification. The present sequence is a cDNA encoding Trichoderma reesei ptc2 protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  is a sering-threonine phosphatase derived from human placenta. The nucleic acid sequence encodes a human protein phosphatase of the protein serine/threonine phosphatase family and is of the prot class which are regulate in the regulation of fatty acid and cholesterol biosynthesis. The MP-19 protein is useful in the treatment of leukaemia, brain, prostate and breast cancer, Alzaheimer's, Huntington's or Parkinson's diseases, epilepsy, reproductive disorders and regulation of spermatogenesis or maturation of mammalian germ cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 981 tggtacaacagcggtggtggccctgatacgagggaagcagttgattgtagccaacgcagg 1040

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1515 ggactcgcgatgtgttatatcacgcagtggacaagccattgaaatgagcatcgaccacaa 1574
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1575 gcccgaagatgacgaagaagcctcgcgcataataaaggcaggtggtcgggttacacttga 1634
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       tgggagtactgcagtggtggctctgattcgtggcaataaactgttcgtcgcaaacgctgg

The protein of the invention is a fibroblast growth factor-inducible protein (FIN13) serine/threonine phosphatase, which has a collagen-homology domain, an acidic box, a serine/threonine phosphatase domain and a charged domain characteristic of a putative nuclear localisation sequence. A host cell transformed with this sequence is used for the recombinant production of FIN13. A vector containing this

ä
sequence can be used to increase the level of expression of FIN13, especially to treat a disease or disorder associated with uncontrolled proliferation in an animal. FIN13 can also be administered directly to treat uncontrolled proliferation, e.g. hyperproliferative disorders, neoplasms and tumours. A labelled antibody against the encoded protein, or an antisense oligonucleotide against this sequence can be used to detect and quantitate FIN13 in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1073

                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

The sequence data for this patent did not form part of the printed specialication, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2878 gaacgtaaccctaccagctgaggaacaaatgatatctgccctacctgacataaagaagct 2937
